Document Intake - Technical Spec

Fictional technical specification | Version 1.0

Document ID:	SAMPLE-TS-001
Owner:	Demo Platform Team
Category:	Technical Specification

1. Purpose

The Demo Knowledge Intake Service receives approved business documents, records metadata, and places each item in a processing queue. This fictional specification is provided only for testing an ingestion interface.

2. Functional requirements

TS-01: Accept PDF, XLS, and XLSX files only.

TS-02: Reject files larger than 25 MB.

TS-03: Capture file name, category, submitter, and upload timestamp.

TS-04: Display Processing, Ingested, Failed, or Removed status.

TS-05: Retain a removal reason for audit history.

3. Processing lifecycle

A newly submitted document starts in Processing. A successful process changes the status to Ingested. A validation or processing error changes the status to Failed. Removal marks the record as Removed while retaining its audit information.

4. Test scenario

Upload this PDF using the Technical Specification category. Edit the record and replace this source with sample-business-requirements.pdf. Verify that the file name and size change and that mock processing runs again.
